

## Environmental Disclosure Statement for Electricity Products Supplied by Energy Me

Electricity can be generated in a number of ways with different impacts on the environment. The standardized environmental information shown below allows you to compare this electricity product with electricity products offered by other electric suppliers. The data shown below are default values and do not necessarily reflect the energy that Energy Me will supply.

### Air Emissions

The emission data given are default values and represent the average amount of air pollution associated with the generation of electricity in the region. This amount is compared to the New Jersey benchmark. The benchmark approximates the average emission rate for all electricity generation in New Jersey.

CO<sub>2</sub> is a "greenhouse gas" which may contribute to global climate change. NO<sub>x</sub> and SO<sub>2</sub> react to form acids found in acid rain. NO<sub>x</sub> also reacts to form ground level ozone, an unhealthy component of "smog."

### Energy Conservation

Energy Me is not investing in energy conservation measures for this electricity product. Energy conservation measures means less electricity needs to be generated and pollution is avoided.

Avoided Generation	Avoided Air Emissions
0 kWh	0 tons CO <sub>2</sub>
	0 tons NO <sub>x</sub>
	0 tons SO <sub>2</sub>

### Energy Source

Energy Me relied on these energy resources to provide the electricity product.

Sources of Electricity Supplied from June 1, 2017 to May 31, 2018	%
Coal	31.12%
Gas	28.32%
Hydroelectric (Large)	1.10%
Nuclear	35.32%
Oil	0.21%
Renewable Energy Sources	3.93%
Captured Methane Gas	0.32%
Fuel Cells	0.00%
Hydroelectric (small)	0.00%
Solar	0.21%
Solid Waste	0.48%
Wind	2.70%
Wood or other biomass	0.22%
<b>Total</b>	<b>100%</b>
